

INSTRUCTIONS

ODOR LIQUIDATOR effectively eliminates the odor of smoke, urine, feces, mold, decomposition, pesticides, skunk, and general household, commercial, institutional, and industrial odors.

General Application: For carpets, walls, floors, refrigerators, showers, toilets, or anything that can be cleaned with water, dissolve two-to-three (2-3) ounces of ODOR LIQUIDATOR in one (1) gallon of warm (110°) water. Apply sufficient solution to penetrate odor-resistant surfaces with sprayer. Continue applications until odor is completely eliminated.

Heavy, Pungent Odors: For skunk, smoke, human and animal wastes, use three-to-four (3-4) ounces of ODOR LIQUIDATOR per gallon of warm (110°) water. Apply sufficient solution to penetrate odor-resistant surfaces with sprayer, or by pouring. Continue applications until odor is completely eliminated. Odor will not return, as long as odor-causing materials are not present.

CAUTION

ODOR LIQUIDATOR contains only non-toxic ingredients. Because of its concentrated form, users, especially those individuals who are hypersensitive and/or troubled with emphysema or allergic, asthmatic, or other pulmonary disorders, should avoid liquid exposure to the skin, inhaling vapors, powder, and aerosol during application. ODOR LIQUIDATOR is not edible.

Emergency Procedures: In case of exposure to the skin, wash well with mild soap and rinse thoroughly. For eye exposure, flush freely with water for least 15 minutes. If skin or eye irritation persists, or if vapors inhaled cause pulmonary reaction, call a physician. If swallowed, induce vomiting and call a physician.
